

Penta Network Security Monitoring

A Penta Consulting Managed Service

Resilient network security is crucial to combat the known and unknown cyber threats. Penta Network Security Monitoring solution provides you with 100% real-time view of your entire network infrastructure. Our solution enables you to monitor all devices, traffic and behaviour, meaning you are alerted to any non-compliant activity on your network.

As part of our award-winning Managed Services, we build and deliver a complete solution to ensure you are better defended against Cybersecurity threats.

Support your in house team with an award winning solution

complete network monitoring solution

As soon as a device connects to your network, Penta will detect it within moments; providing the exact amount of granular information about its place and function within the network. With accurate data to hand about each system's usefulness, age, routing, and criticality, you can make informed decisions about levels of IT support cover required – without relying on mere guesswork.

Our software can help you assess which devices need critical, top priority support and which ones don't. For example, there's no need paying for top level, 4-hour turnaround support for an underused, noncritical switch or router.

Network Monitoring Solutions

Managed Detection & Response

Assessment Services

Vulnerability Service

- Penta will identify the criticality of devices across the network, giving a crystal-clear picture of which devices need urgent break-fix support and which are less critical
- Automated, continuous discovery of network changes, moves, and additions, resulting in complete, real-time visibility and reporting
- We will help you identify obsolete, potentially vulnerable EoL systems in need of upgrade or replacement
- Record traffic routing patterns and bottlenecks, enabling NetOps technicians to maximise network efficiency and minimise data "black holes"
- Penta will provide in-depth, granular details about every networked device, including OS versions, software installs, running processes, serial numbers and operating temperatures
- Inventories network edge and endpoint hardware, enabling robust perimeter security and immediate remediation of rogue and shadow IT
- Penta security monitoring solutions are easily deployed, cost-effective network monitoring platform with numerous cost-saving, security, and efficiency use cases

100% network view
